Subject: Red Hat's offer for DOJ/MS settlement

I have read the settlement offer from Red Hat in reference to Microsoft - Dept. of Justice.

I read the Microsoft has been found guilty of being a monopoly and now they want to extend their monopoly into a place they where they have the opportunity to expand their monopoly.

I would like to see Red Hat's proposal accepted and implemented.

It would give more benefit to the students receiving the computers and training.

It would also satisfy the guilty verdict by adding training in an operating system other than Microsoft's Windows.

We would be introducing the next generation into a world with real choices.
